

REMARKS

Claims 1-24 remain pending in this application. Claims 1 and 13 are independent. Claims 1-3, 7, 11-12, 14-15, 19, and 23-24 have been amended, and no claims have been added or canceled by this Amendment.

No new matter is involved with any claim amendment, as these amendments have been made responsive to the Examiner's asserted indefiniteness and to clarify the statutory nature of the subject matter of independent claim 1.

Indefiniteness Rejection

Withdrawal of the rejection of claims 2, 3, 7, 11, 12, 14, 15, 19, and 23-24 under 35 U.S.C. §112, second paragraph, as allegedly being indefinite, is requested. These claims have been amended in a manner that is believed to overcome the stated bases for rejection.

Consideration and allowance of amended claims 2, 3, 7, 11, 12, 14, 15, 19, and 23-24 are respectfully requested.

Anticipation Rejection by Lawrence

Withdrawal of the rejection of claims 1-3, 5-15 and 17-24 under 35 U.S.C. §102(e) as allegedly being anticipated by Lawrence (US 2003/0233319) is requested.

Specific Deficiencies of Lawrence with Respect to the Claims

Independent Claim 1

The applied art, Lawrence, does not disclose a computer-implemented method for processing a payment to a financial transaction beneficiary located in a foreign country, wherein the method includes, *inter alia*, “receiving, in a computer processor, financial transaction payment instructions from a Client Bank over a computer network in a format associated with a settlement funds transfer system that provides guaranteed funding of the transaction to a Receiver Financial Institution...generating, in the computer processor, foreign financial transaction payment instructions for at least one financial institution located in a foreign country and transmitting the payment instructions over the computer network, the

foreign financial transaction payment instructions including data in a funds transfer messaging service format that is compatible with both the Receiver Financial Institution and the at least one financial institution,” as recited in independent claim 1, as amended (*emphasis added*).

Independent Claim 13

Further, the applied art, Lawrence, does not disclose a mechanism for processing a payment to a financial transaction beneficiary located in a foreign country, wherein the mechanism includes, *inter alia*, “an interface for receiving payment instructions from a Client Bank in a format associated with a settlement funds transfer system that provides **guaranteed funding of a transaction to a Receiver Financial Institution**; and at least one processor including software for analyzing the received payment instructions and generating foreign financial transaction payment instructions for at least one financial institution located in a foreign country, the foreign financial transaction payment instructions including data in a funds transfer messaging service format that is compatible with both the Receiver Financial Institution and the at least one financial institution,” as recited in independent claim 13, as previously presented (*emphasis added*).

Lawrence discloses at paragraph [0023] that a depository institution that maintains a reserve or clearing account with a Federal Reserve Bank may use FEDWIRE® to send payments to, or receive payments from, other account holders directly. Lawrence goes on in that paragraph to indicate that other transfers can include SWIFT, FUNDS, CHIPS, National Automated Clearinghouse Association (NACHES) formatted transfers, or other electronic or wire transfer platform. Lawrence clearly is not directed to, and even more clearly does not provide a teaching or suggestion of coupling FEDWIRE transfers with these other types of transfers to provide guaranteed funding of funds transfers from the U.S. to non-U.S. entities.

Accordingly, since the applied art does not disclose all the claimed limitations, reconsideration and allowance of independent claims 1 and 13 and dependent claims 2-12 and 14-24 are respectfully requested.

Response to Examiner's Arguments

One major issue in the rejections appears to be the Examiner's conflation of "any insured bank" with the concept of "guaranteed funding of the transaction", as variously recited in the independent claims. These are different financial concepts, as discussed below.

Applicant submits that an "insured bank" as set forth by the Examiner corresponds to a bank whose investor's cash deposits are protected by Federal Deposit Insurance Corporation (FDIC) insurance, which generally protects the first \$100000 of deposits that are payable in the United States, and which now temporarily protects the first \$250000 of deposits that are payable in the United States until December 31, 2009. This FDIC "insurance", or an "insured bank" with such FDIC insurance has no bearing on or relevance to "guaranteed funding" of a financial transaction, contrary to the Examiner's incorrect contention.

The "guaranteed funding" aspect of the transaction in Applicant's claimed invention is accomplished in one or more embodiments by use of a funds transfer system (e.g., FEDWIRE[®]) which, by its nature and by binding agreement between banks authorized to make such transactions, requires the parties to honor the transaction and to clear any funds required by the funds transfer within a certain time frame.

Further, FEDWIRE guaranteed funds transfers heretofore have only been used in domestic U.S. financial transactions, and have not been used conventionally, until Applicant's claimed invention, to make international funds transfers, i.e., from the U.S. to non-U.S. countries with the same security and guaranteed funding as in a conventional FEDWIRE transaction.

Discussion of Lawrence

According to its Abstract, Lawrence is purportedly directed to methods and systems for managing risk related to transfer of funds. The method can be implemented in a computer system and indicating in the computer system that a person is a transaction participant according to the person's status as at least one of: a transaction originator; a transaction intermediary, a transaction recipient or a transaction beneficiary. Data can be gathered into

the computer system generally related to one or more risk variables. Data can also be received relating details of a financial transaction. The received data can be structured to generally relate to one or more risk variables according to risk criteria. One or more reports can be generated which relate to risk due diligence wherein the report includes an indication that the transaction participant is associated with elevated risk and at least some of the structured data.

Lawrence further asserts that it relates to a method and system for facilitating the identification, investigation, assessment and management of legal, regulatory, financial and reputational risks ("Risks"). In particular, Lawrence allegedly relates to a computerized system and method for banks, non-bank financial institutions and any other entity involved in financial transactions to access information compiled on a worldwide basis and relate such information to a risk variable, such as a political or geographic area involved in a wire transfer, wherein the information is conducive to quantifying and managing financial, legal, regulatory and reputational risk associated with the transaction.

Lawrence attempts to respond to various obligations of Financial Institutions that can include those imposed by the Department of the Treasury and the federal banking regulators which adopted suspicious activity report ("SAR") regulations. SAR regulations can require that a Financial Institution file a SAR whenever the institution detects a known or suspected violation of federal law, or a suspicious transaction related to a money laundering activity or a violation of the Bank Secrecy Act (BSA). Such regulations can impose a variety of reporting obligations on a Financial Institution. Perhaps most broadly relevant to the purported invention of Lawrence, the reporting obligations require an institution to report transactions aggregating to \$5,000 that involve potential money laundering or violations if the Financial Institution, knows, suspects, or has reason to suspect that the transaction involves funds from illegal activities, is designed to disguise such funds, has no business or legitimate purpose, or is simply not the sort of transaction in which the particular customer would normally be expected to engage, and the institution knows of no reasonable explanation for the transaction after examining the available facts.

Thus, Federal regulators require that Financial Institutions are subject to significant obligations to "know" their customer and to engage in adequate monitoring of transactions. However, bank personnel generally do not have a mechanism available to provide real time

assistance to assess a risk factor or otherwise qualitatively manage risk. In the event of a problem, it is often difficult to quantify to regulatory bodies, shareholders, newspapers and other interested parties, diligence exercised by the Financial Institution to properly identify and respond to risk factors. Absent a means to quantify good business practices and diligent efforts to contain risk, a Financial Institution may appear to be negligent in some respect.

Thus, Lawrence purportedly responds to the above risks by a method and system that allegedly draws upon information gathered globally and which is utilized to assist with risk management and due diligence related to wire transfers. To alleviate problems inherent in the prior art, Lawrence introduces systems and methods to facilitate ascertaining and managing Risks associated with a wire transfer of money. Whatever valid purpose the purported invention of Lawrence serves in mitigating “suspicious activity”, Lawrence does not address “guaranteed funding” of a financial transfer of funds, as specifically claimed by Applicant.

Accordingly, Applicant submits that Lawrence does not disclose all the limitations of the pending claims.

Unpatentability Rejection over Lawrence in View of SWIFT.com

Withdrawal of the rejection of claims 4 and 16 under 35 U.S.C. §103(a) as being unpatentable over Lawrence in view of SWIFT.com is requested. The Examiner has failed to make a *prima facie* case of unpatentability. Lawrence and its deficiencies has been discussed above with respect to independent claims 1 and 13.

The Examiner admits that Lawrence is deficient with respect to providing a teaching or suggestion of “foreign financial transaction payment instructions which comply with SWIFT MT 103 specifications (i.e. messaging standards),” and alleges that SWIFT.COM makes up for this admitted deficiency.

Discussion of SWIFT.COM and its Deficiencies

This non-patent literature reference is relied upon by the Examiner to provide a teaching of the SWIFT MT103 message. While the use of SWIFT MT103 is certainly acknowledged, SWIFT.COM, however, does not make up for the deficiencies of Lawrence

discussed above with respect to the unpatentability rejection of independent claims 1 and 13, from which claims 4 and 16 respectively depend, as further discussed below.

In particular, SWIFT.COM does not teach or suggest "receiving, in a computer processor, financial transaction payment instructions from a Client Bank over a computer network in a format *associated with a settlement funds transfer system that provides guaranteed funding of the transaction* to a Receiver Financial Institution..." as recited in independent claim 1, from claim 4 depends.

In addition, SWIFT.COM does not teach or suggest "an interface for receiving payment instructions from a Client Bank *in a format associated with a settlement funds transfer system that provides guaranteed funding of a transaction to a Receiver Financial Institution,*" as recited in independent claim 13 from which claim 16 depends.

Since the combination of Lawrence and SWIFT.COM do not teach or suggest all the limitations of independent claims 1 and 13 from which claims 4 and 16 respectively depend, reconsideration and allowance of claims 4 and 16 are respectfully requested.

Conclusion

All rejections having been addressed, Applicant submits that each of pending claims 1-24 in the present application is in immediate condition for allowance. An early indication of the same would be appreciated.

In the event the Examiner believes that an interview would be helpful in resolving any outstanding issues in this case, the Undersigned Attorney is available at the telephone number indicated below.

Although no fees are believed to be due, for any fees that are due during the pendency of this application, please charge Deposit Account Number 03-3975 from which the Undersigned Attorney is authorized to draw. The Commissioner for Patents is also authorized to credit any over payments to the above-referenced Deposit Account.

Due Date: November 13, 2008
